About this Manual

This User Manual describes Mellanox Technologies ConnectX®-3 40/56 Gigabit Ethernet Single and Dual QSFP+ port PCI Express x8 adapter cards. It provides details as to the interfaces of the board, specifications, required software and firmware for operating the board, and relevant documentation.

Intended Audience

This manual is intended for the installer and user of these cards.

The manual assumes basic familiarity with Ethernet networks and architecture specifications.

Document Conventions

When discussing memory sizes, MB and MBytes are used in this document to mean size in megaBytes. The use of Mb or Mbits (small b) indicates size in mega bits. In this document PCIe is used to mean PCI Express.
Technical Support

Customers who purchased Mellanox products directly from Mellanox are invited to contact us through the following methods.

- **URL:** [http://www.mellanox.com => Support](http://www.mellanox.com => Support)
- **E-mail:** support@mellanox.com
- **Tel:** +1.408.916.0055

Customers who purchased Mellanox M-1 Global Support Services, please see your contract for details regarding Technical Support.

Customers who purchased Mellanox products through a Mellanox approved reseller should first seek assistance through their reseller.

Firmware and Software Updates

The Mellanox support downloader contains software, firmware and knowledge database information for Mellanox products. Access the database from the Mellanox Support web page, [http://www.mellanox.com => Support](http://www.mellanox.com => Support) or use the following link to go directly to the Mellanox Support Download Assistant page, [http://www.mellanox.com/supportdownloader/](http://www.mellanox.com/supportdownloader/).
1 Introduction

This is the User Guide for Mellanox Technologies Ethernet adapter cards based on the ConnectX®-3 EN integrated circuit device. These adapters connectivity provide the highest performing and most flexible interconnect solution for PCI Express Gen3 servers used in Enterprise Data Centers, High-Performance Computing, and Embedded environments.

This chapter covers the following topics:

- Section 1.1, “Product Overview,” on page 11
- Section 1.2, “Features and Benefits,” on page 12
- Section 1.4, “Connectivity,” on page 13

1.1 Product Overview

The following tables provide the ordering part number, port speed, number of ports, and PCI Express speed. Each adapter comes with two bracket heights - short and tall.

**Table 3 - Single and Dual-port 40/56 Gigabit Ethernet Adapter Cards**

<table>
<thead>
<tr>
<th>Ordering Part Number (OPN)</th>

</table>
## 1.2 Features and Benefits

<table>
<thead>
<tr>
<th>Table 4 - Features</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PCI Express (PCIe)</strong></td>
<td>Uses PCIe Gen 3.0 (1.1 and 2.0 compatible) through an x8 edge connector up to 8GT/s</td>
</tr>
<tr>
<td><strong>10/40/56 Gigabit Ethernet</strong></td>
<td>Mellanox adapters comply with the following IEEE 802.3* standards: IEEE Std 802.3-2008 Ethernet IEEE Std 802.3ae 10 Gigabit Ethernet IEEE Std 802.3ba 40 Gigabit Ethernet IEEE Std 802.3ad Link Aggregation and Failover</td>
</tr>
<tr>
<td><strong>Memory</strong></td>
<td>PCI Express - stores and accesses InfiniBand and/or Ethernet fabric connection information and packet data SPI - includes one 16Mb SPI Flash device (M25PX16-VMN6P device by ST Microelectronics) EEPROM - accessible through the I²C-compatible interface. The EEPROM capacity is 4Kb.</td>
</tr>
<tr>
<td><strong>RDMA over Converged Ethernet (RoCE)</strong></td>
<td>Leveraging Data Center Bridging capabilities, RoCE provides efficient low latency RDMA services over Layer 2 Ethernet.</td>
</tr>
<tr>
<td><strong>CPU offload</strong></td>
<td>Adapter functionality enabling reduced CPU overhead allowing more available CPU</td>
</tr>
<tr>
<td><strong>GPUDirect RDMA</strong></td>
<td>Using GPUDirect RDMA, adapters can directly read and write CUDA host and device memory, eliminating unnecessary system memory copies and CPU overhead, resulting in significant performance improvements.</td>
</tr>
<tr>
<td><strong>Sockets Acceleration</strong></td>
<td>Applications utilizing TCP/UDP/IP transport can achieve industry leading throughput over InfiniBand or 10 or 40GbE. The hardware-based stateless offload engines in ConnectX-3 reduce the CPU overhead of IP packet transport. Sockets acceleration software further increases performance for latency sensitive applications.</td>
</tr>
<tr>
<td><strong>Quality of Service (QoS)</strong></td>
<td>Support for port-based Quality of Service enabling various application requirements for latency and SLA</td>
</tr>
<tr>
<td><strong>Hardware-based I/O virtualization</strong></td>
<td>ConnectX-3 provides dedicated adapter resources and guaranteed isolation and protection for virtual machines within the server.</td>
</tr>
<tr>
<td><strong>SR-IOV</strong></td>
<td>ConnectX-3 Pro SR-IOV technology provides dedicated adapter resources and guaranteed isolation and protection for virtual machines (VM) within the server. I/O virtualization with ConnectX-3 Pro gives data center managers better server utilization while reducing cost, power, and cable complexity.</td>
</tr>
<tr>
<td><strong>Storage Acceleration</strong></td>
<td>A consolidated compute and storage network achieves significant cost-performance advantages over multi-fabric networks. Standard block and file access protocols can leverage InfiniBand RDMA for high-performance storage access.</td>
</tr>
</tbody>
</table>
1.3 Operating Systems/Distributions

- Citrix XenServer 6.1
- Novell SLES, Red Hat Enterprise Linux (RHEL), and other Linux distributions
- Microsoft Windows Server 2008/2012
- OpenFabrics Enterprise Distribution (OFED)
- OpenFabrics Windows Distribution (WinOF)
- Ubuntu 12.04
- VMware ESXi 4.x and 5.x

1.4 Connectivity

- Interoperable with InfiniBand or 10/40 Gb Ethernet switches.
- Interoperable with 56GbE Mellanox Switches.
- Passive copper cable with ESD protection
- Powered connectors for optical and active cable support
- QSFP to SFP+ connectivity through QSA module
2 Interfaces

Each adapter card includes the following interfaces:

- “Ethernet Interface”
- “PCI Express Interface”
- “I2C-compatible Interface”
- “LED Interface”

Figure 1: MCX314A-BCBT Card

The adapter cards include special circuits to protect from ESD shocks to the card/server when plugging copper cables.

2.1 Ethernet Interface

The network ports of the ConnectX®-3 adapter cards are compliant with the IEEE 802.3 Ethernet standards listed in Table 4, “Features,” on page 12. Ethernet traffic is transmitted through the cards’ QSFP+ connectors.

2.2 PCI Express Interface

The ConnectX®-3 adapter cards support PCI Express 3.0 (1.1 and 2.0 compatible) through an x8 edge connector. The device can be either a master initiating the PCI Express bus operations or a slave responding to PCI bus operations. The following lists the PCIe interface features:

- PCIe Base 3.0 compliant, 1.1 and 2.0 compatible
- 2.5, 5.0, or 8.0GT/s link rate x8
• Auto-negotiates to x8, x4, x2, or x1
• Support for MSI/MSI-X mechanisms

2.3 I²C-compatible Interface

A three-pin header on the adapter cards is provided as the I²C-compatible interface. See Figure 9, “Mechanical Drawing of the Dual-port MCX314A-BCBT Adapter Card,” on page 50, for the location on the board.

2.4 LED Interface

There are two I/O LEDs per port. For LED specifications please refer to Section 7.2, “MCX314A-BCBT Specifications,” on page 47.
3 Hardware Installation

3.1 System Requirements

3.1.1 Hardware
A system with a PCI Express x8 slot is required for installing the card.

3.1.2 Operating Systems/Distributions

3.1.3 Software Stacks
Mellanox OpenFabric software package - MLNX_EN for Linux, WinOF for Windows and ESX 5.1 for VMware. See Chapter 4, “Driver Installation”.

3.2 Safety Precautions

The adapter is being installed in a system that operates with voltages that can be lethal. Before opening the case of the system, observe the following precautions to avoid injury and prevent damage to system components.

1. Remove any metallic objects from your hands and wrists.
2. Make sure to use only insulated tools.
3. Verify that the system is powered off and is unplugged.
4. It is strongly recommended to use an ESD strap or other antistatic devices.

3.3 Pre-installation Checklist

1. Verify that your system meets the hardware and software requirements stated above.
2. Shut down your system if active.
3. After shutting down the system, turn off power and unplug the cord.
4. Remove the card from its package. Please note that the card must be placed on an antistatic surface.
5. Check the card for visible signs of damage. Do not attempt to install the card if damaged.

3.4 Bracket Installation Instructions

The card is usually shipped with a tall bracket installed. If this form factor is suitable for your requirements, you can skip the remainder of this section and move to Section 3.5, “Card Installation Instructions,” on page 19. If you need to replace it with the short bracket that is included in the shipping box, please follow the instructions in this section.

To replace the bracket you will need the following parts:

• The new bracket of the proper height
• One new gasket
- The 2 screws saved from the removal of the bracket
- The 2 fiber washers saved from the removal of the bracket

### 3.4.1 Removing the Existing Bracket

**Figure 2: Bracket Screws**

1. Remove the two screws holding the bracket in place. The bracket comes loose from the card.

   Be careful not to put stress on the LEDs.

2. Save the two screws and the two fiber washers.

### 3.4.2 Installing the New Bracket

#### 3.4.2.1 Gasket Installation

Note: The following instructions relate to the installation of the gasket for adapter cards that are not shipped with a gasket already installed. Mellanox Technologies now provides all ConnectX-3 adapter cards with the gasket already installed unto the bracket.

Note: Due to risk of damaging the EMI gasket, it is not recommended to replace the bracket more than three times.

1. Remove the paper to expose the adhesive on the gasket.
2. Place the gasket onto the new bracket. Make sure to correctly align the gasket with the hole in the bracket.
3. If the old gaskets are still on the card, remove them before installing the new bracket.
3.4.2.2 Installing the Bracket

1. Place the bracket onto the card until the screw holes line up. See Figure 5

   ![Warning]
   Do not force the bracket onto the card. You may have to gently push the LEDs using a small screwdriver to align the LEDs with the holes in the bracket.

2. Screw on the bracket using the screws and washers saved from the bracket removal procedure above.
3. Make sure that the LEDs are aligned onto the bracket holes.
4. Use a torque driver to apply up to 2 lbs-in torque on the screws.

### 3.5 Card Installation Instructions

1. Before installing the card, make sure that the system is off and the power cord is not connected to the server. Please follow proper electrical grounding procedures.
2. Open the system case.
3. Place the adapter in an available PCI Express slot.

A lesser width adapter can be seated into a greater width slot (x4 in a x8), but a greater width adapter cannot be seated into a lesser width slot (x8 in a x4). Align the adapter connector edge with the PCI Express connector slot.

4. Applying even pressure at both corners of the card, insert the adapter card into the slot until it is firmly seated. When the adapter is properly seated, the adapter port connectors are aligned with the slot opening, and the adapter faceplate is visible against the system chassis.
5. Secure the adapter with the adapter clip or screw.

6. Close the system case.

3.6 Cables and Modules

To obtain the list of supported cables for your adapter, please refer to “Mellanox Products Approved Cable Lists” at:
www.mellanox.com/related-docs/user_manuals/Mellanox_approved_cables.pdf.

3.6.1 Cable Installation

1. All cables can be inserted or removed with the unit powered on.

2. To insert a cable, press the connector into the port receptacle until the connector is firmly seated.

3. After inserting a cable into a port, the Green LED indicator will light when the physical connection is established (that is, when the unit is powered on and a cable is plugged into the port with the other end of the connector plugged into a functioning port). See Section 7.2, “MCX-314A-BCBT Specifications,” on page 47.

4. After plugging in a cable, lock the connector using the latching mechanism particular to the cable vendor. When a logical connection is made the Yellow LED will light. When data is being transferred the yellow led will blink. See Section 7.2, “MCX314A-BCBT Specifications,” on page 47.

5. Care should be taken as not to impede the air exhaust flow through the ventilation holes. Use cable lengths which allow for routing horizontally around to the side of the chassis before bending upward or downward in the rack.

6. To remove a cable, disengage the locks and slowly pull the connector away from the port receptacle. Both LED indicators will turn off when the cable is unseated.
3.7 Identify the Card in Your System

3.7.1 On Windows

1. Open Device Manager on the server. Click start => Run, and then enter “devmgmt.msc”.
2. Expand System Devices and locate your Mellanox ConnectX-3 adapter card.
3. Right click the mouse on your adapter’s row and select properties to display the adapter card properties window.
4. Click the Details tab and select Device Instance Id (Windows 2003) or Hardware Ids (Windows 2008/R2) from the Properties pull-down menu.

Figure 6: PCI Device

6. In the Value display box, check the fields VEN and DEV (fields are separated by ‘&’). In the display example above, notice the sub-string “PCI\VEN_15B3&DEV_1003”:
   - VEN is equal to 0x15B3 – this is the Vendor ID of Mellanox Technologies;
   - DEV is equal to 1003 – this is a valid Mellanox Technologies PCI Device ID.

If the PCI device does not have a Mellanox adapter ID, return to Step 2 to check another device.

The list of Mellanox Technologies PCI Device IDs can be found in the PCI ID repository at http://pci-ids.ucw.cz/read/PC/15b3.
3.7.2 On Linux

Get the device location on the PCI bus by running lspci and locating lines with the string “Mellanox Technologies”:

```
> lspci |grep -i Mellanox
27:00.0 Network controller: Mellanox Technologies MT27500 Family [ConnectX-3]
```
4 Driver Installation

4.1 Linux Driver

For Linux, download and install the latest MLNX_EN driver software package available via the Mellanox web site at: http://www.mellanox.com => Products => Software => Ethernet Drivers => ConnectX®-3 EN 10/40GigE Linux Driver => Download. Follow the installation instructions included in the download package (also available from the download page).

4.1.1 Hardware and Software Requirements

Table 5 - Software and Hardware Requirements

<table>

<tr>
<td>Software Dependencies</td>
<td>To install the driver software, kernel sources must be installed on the machine. MLNX_EN driver cannot coexist with OFED software on the same machine. Hence when installing MLNX_EN all OFED packages should be removed (done by the mlnx_en install script)</td>
</tr>
</tbody>
</table>

4.1.2 Installing the Driver

Step 1. Download Driver Package

Please download the current driver package from http://www.mellanox.com => Products => Software => Ethernet Driver => Linux Driver => Download.

Step 2. Install Driver

Run the following commands to install the driver:

```
#> tar xzvf mlnx_en-1.5.10.tgz file
#> cd mlnx_en-1.5.10
#> ./install.sh
```

The package consists of several source RPMs. The install script rebuilds the source RPMs and then installs the created binary RPMs. The created kernel module binaries are placed under /lib/modules/<kernel-ver>/updates/kernel/drivers/net/mlx4. mlnx_en installer supports 2 modes of
installation. The install scripts selects the mode of driver installation depending of the running OS/kernel version.

1. Kernel Module Packaging (KMP) mode, where the source rpm is rebuilt for each installed flavor of the kernel. This mode is used for RedHat and SUSE distributions.

2. Non KMP installation mode, where the sources are rebuilt with the running kernel. This mode is used for vanilla kernels.

Note: If the Vanilla kernel is installed as rpm, please use the "--disable-kmp" flag when installing the driver.

The kernel module sources are placed under /usr/src/mellanox-mlnx-en-1.5.10/. Run the following commands to recompile the driver:

```
#> cd /usr/src/mellanox-mlnx-en-1.5.10/
#> scripts/mlnx_en_patch.sh
#> make
#> make install
```

The uninstall and performance tuning scripts are installed.

Note: If the driver was installed without kmp support, the sources would be located under /usr/srs/mlnx_en-1.5.10/

### 4.1.3 Loading the Driver

**Step 1.** Make sure no previous driver version is currently loaded
Run:

```
#> modprobe -r mlx4_en
```

**Step 2.** Load the new driver version
Run:

```
#> modprobe mlx4_en
```

The result is a new net-device appearing in 'ifconfig -a' output.

### 4.1.4 Unloading the Driver

To unload the Ethernet driver run:

```
#> modprobe mlx4_en
```

### 4.1.5 Uninstalling the Driver

To uninstall the mlnx_en driver run:

```
#> /sbin/mlnx_en_uninstall.sh
```

### 4.2 Windows Driver

For Windows, download and install the latest Mellanox WinOF VPI for Windows software package available via the Mellanox web site at: [http://www.mellanox.com](http://www.mellanox.com) => Products => Software
=> Ethernet Drivers => Windows SW/Driver => Download. Follow the installation instructions included in the download package (also available from the download page).

4.2.1 Hardware and Software Requirements

Table 6 - Software and Hardware Requirements

<table>
<thead>
<tr>
<th>Requirements</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Required Disk Space for Installation</td>
<td>100 MB</td>

<td>Windows Server 2008 R2 (64 bit only)</td>
</tr>
<tr>
<td>Installer Privileges</td>
<td>The installation requires administrator privileges on the target machine.</td>
</tr>
</tbody>
</table>

4.2.2 Downloading MLNX_WinOF

Follow these steps to download the .exe according to your Operating System.

**Step 1.** Verify the machine architecture.
1. Open a CMD console (Click start--->Run and enter CMD).
2. Enter the following command:

   ```
   > echo %PROCESSOR_ARCHITECTURE%
   ```

   On an x64 (64-bit) machine, the output will be “AMD64”.

**Step 2.** Go to the MLNX_WinOF for Windows Web page at http://www.mellanox.com => Products => Software => Ethernet Drivers => Windows SW/Drivers.

**Step 3.** Download the .exe image according to the architecture of your machine (see Step 1.). The name of the .exe is in the following format MLNX_VPI_WinOF-<version>_All_<OS>_<arch>.exe.

Installing the incorrect .exe file is prohibited. If you do so, an error message will be displayed. For example, if you try to install a 64-bit .exe on a 32-bit machine, the wizard will display the following (or a similar) error message:

4.2.3 Extracting Files Without Running Installation

To extract the files without running installation, perform the following steps.

**Step 1.** Open a CMD console (Click Start--->Run and enter CMD).

**Step 2.** Enter the following command:

   ```
   MLNX_VPI_WinOF-<version>_All_<OS>_<arch>.exe /a
   ```
Step 3. Click Next to create a server image.

Step 4. Click Change and specify the location in which the files are extracted to.
Step 5. Click Install to extract this folder, or click Change to install to a different folder.

Step 6. To complete the extraction, click Finish.

4.2.4 Installing MLNX_WinOF
This section provides instructions for two types of installation procedures:

- “Attended Installation”
  An installation procedure that requires frequent user intervention.
- “Unattended Installation”
4.2.4.1 Attended Installation

The following is an example of a MLNX_WinOF_win8 x64 installation session.

**Step 1.** Double click the .exe and follow the GUI instructions to install MLNX_WinOF.

To configure your setup to contain the logs option, please run the following command after opening a CMD console:

```
MLNX_VPI_WinOF-4_40_0_All_win8_x64.exe /v"/l*vx [LogFile]"
```

If you do not want to upgrade your firmware version, run the following command:

```
MLNX_VPI_WinOF-4_40_0_All_win8_x64.exe /v" MT_SKIPFWUPGRD=1"
```

For further help, please run:

```
MLNX_VPI_WinOF-4_40_0_All_win8_x64.exe /v" /h"
```

**Step 2.** Click Next in the Welcome screen.
Step 3. Read then accept the license agreement and click Next.

![License Agreement](image)

Copyright (c) 2005-2013, Mellanox Technologies All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.

Redistributions in binary form must reproduce the above

- I accept the terms in the license agreement
- I do not accept the terms in the license agreement

Step 4. Select the target folder for the installation.

![Destination Folder](image)

Step 5. The firmware upgrade screen will be displayed in the following cases:
- If the user has an OEM card, in this case the firmware will not be updated.
• If the user has a standard Mellanox card, and the firmware version is older than the one specified in WinOF Installation Guide 4.40, the firmware will be updated accordingly. However, if the user has both OEM card and Mellanox card, only Mellanox card will be updated.

Step 6. Configure your system for maximum performance by checking the maximum performance box.
Step 7. Select a Complete or Custom installation, follow Step a and on, on page 31.

a. Select the desired feature to install:
   - OpenSM - installs Windows OpenSM that is required to manage the subnet from a host. OpenSM is part of the driver and installed automatically.
   - Performances tools - install the performance tools that are used to measure the InfiniBand performance in user environment.
   - Analyze tools - install the tools that can be used either to diagnosed or analyzed the InfiniBand environment.
   - SDK - contains the libraries and DLLs for developing InfiniBand application over IBAL.
   - ND FLTR DLLs: contains the files for standalone installation of the mlx4nd provider.

This step requires rebooting your machine at the end of the installation.
b. Click Install to start the installation.
Step 8. Click Finish to complete the installation.

If the firmware upgrade fails, the following message will be displayed.

4.2.4.2 Unattended Installation

The following is an example of a MLNX_WinOF_win8 x64 unattended installation session.

Step 1. Open the CMD console (click Start > Run and enter ‘cmd’)
Step 2. Install the driver. Run:

```
> MLNX_VPI_WinOF-4_40_0_All_win8_x64.exe /S /v"/qn"
```
Step 3. [Optional] To configure your setup to contain the logs option, please run the following command:

```bash
> MLNX_VPI_WinOF-4_40_0_All_win8_x64.exe /S /vu"/qn" /vu"/i\v" [LogFile]"
```

Step 4. [Optional] If you do not want to upgrade your firmware version, run the following command:

```bash
> MLNX_VPI_WinOF-4_40_0_All_win8_x64.exe /S /vu"/qn" /vu" MT_SKIPFWUPGRD=1"
```

For further help, please run:

```bash
> MLNX_VPI_WinOF-4_40_0_All_win8_x64.exe /v" /h"
```

### 4.2.5 Upgrading MLNX_WinOF

The MLNX_WinOF driver upgrades automatically MLNX_WinOF Windows 2008R2 driver by uninstalling the previous version and installs the new driver. However, MLNX_WinOF driver upgrade in Windows 2012 driver do not completely uninstall the previous version.

- In Windows 2012 (MLNX_WinOF Rev. 4.2 and above), the network configuration is saved upon driver upgrade.
- In Windows 2008 R2 the existing configuration files are not saved upon driver upgrade.

### 4.2.6 Installation Results

Upon installation completion, you can verify the successful addition of the network card(s) through the Device Manager. To see the Mellanox network adapter device, and the Ethernet or
IPoIB network device (depending on the used card) for each port, display the Device Manager and expand “System devices” or “Network adapters”.

![Device Manager](image)

### 4.2.7 OpenSM Activation

OpenSM is a service required by managed networks in InfiniBand environments, and must be activated in one of the machines running on the subnet, otherwise the interface link will not come up. If the cards are connected to a managed network, there is no need to run OpenSM. Only one OpenSM should run per subnet.

In Ethernet interfaces, running OpenSM is not required.

OpenSM does not run as a service during installation as it requires the GUID parameter to decide on which port to work. Setting OpenSM upon setup results in it working only for the first port and not for the others.

- **To run OpenSM as a service, assuming the package was installed in the default path, use:**
  ```shell
  sc create OpenSM1 binPath= "c:\Program Files\Mellanox\MLNX_VPI\IB\Tools\opensm.exe --service" start=auto"
  ```
- **To start the service, run:**
  ```shell
  sc start opensm
  ```

For further information, please refer to the “OpenSM - Subnet Manager” chapter in the User Manual.
4.2.8 Uninstalling MLNX_WinOF

4.2.8.1 Attended Uninstall

➢ To uninstall MLNX_WinOF on a single node, perform one of the following options:
1. Click Start-> Control Panel-> Programs and Features-> MLNX_VPI-> Uninstall.
   (NOTE: This requires elevated administrator privileges.)
2. Double click the .exe and follow the instructions of the install wizard.
3. Click Start-> All Programs-> Mellanox Technologies-> MLNX_WinOF-> Uninstall MLNX-_WinOF.

4.2.8.2 Unattended Uninstall

➢ To uninstall MLNX_WinOF in unattended mode, perform the following:

Step 1. Open a CMD console.
Step 2. Uninstall the driver. Run:
```
MLNX_VPI_WinOF-4.40.0_All_win8_x64.exe /S /x /v"/qn"
```

4.2.9 Assigning Port IP After Installation

By default, your machine is configured to obtain an automatic IP address via a DHCP server. In some cases, the DHCP server may require the MAC address of the network adapter installed in your machine.

➢ To obtain the MAC address:

Step 1. Open a CMD console
Step 2. Display the MAC address as “Physical Address”
```
ipconfig /all
```

Configuring a static IP is the same for both IPoIB and Ethernet adapters.

➢ To assign a static IP address to a network port after installation:

Step 1. Open the Network Connections window. Locate Local Area Connections with Mellanox devices.
Step 2.  Right-click a Mellanox Local Area Connection and left-click Properties.

Step 4. Select the “Use the following IP address:” radio button and enter the desired IP information.

Step 5. Click OK.
Step 6. Close the Local Area Connection dialog.
Step 7. Verify the IP configuration by running `ipconfig` from a CMD console.

```
> ipconfig
...
Ethernet adapter Local Area Connection 4:
    Connection-specific DNS Suffix .: 
    IP Address . . . . . . . . . . . . . . . . : 11.4.12.63
    Subnet Mask . . . . . . . . . . . . . . . . : 255.255.0.0
    Default Gateway . . . . . . . . . . : 
...
```

4.3 Performance Tuning

4.4 VMware Driver

For VMware download and install the latest Mellanox OFED Driver for VMware® ESXi Server-software package available via the Mellanox web site at: http://www.mellanox.com => Products => Software => Ethernet Drivers => VMware Drivers => Download. Follow the installation instructions included in the download package (also available from the download page).

4.4.1 Installing and Running the VBI Driver on ESXi-5.x

4. Log into the VMware ESXi server machine as root.

5. You can either:
   a. Remove any earlier version of the driver from your VMware ESXi server machine prior to installing the new version. Run:
      
      ```
      #> esxcli software vib list
      #> esxcli software vib remove -n net-mlx4-en
      ```

   b. Install the mlx4_en driver VIB package. Run:
      
      ```
      #> esxcli software vib install -v <vib_url>
      ```

   c. Reboot ESXi server (The driver will be loaded automatically).

   OR

   a. Update the driver. Run:
      
      ```
      #> esxcli software vib update -v <vib_url>
      ```

   b. Reboot ESXi server (The driver will be loaded automatically).

   » To verify that the driver is loaded, run:
      
      ```
      #> vmkload_mod -l | grep mlx4_en
      ```

   » To query network uplinks installed on your machine, run:
      
      ```
      #> esxcli network nic list
      ```

   The number of uplinks claimed by MLX4_EN driver should be displayed.

   In Non Multifunction Mode, port 2 is identified as a pseudo device. Therefore devices are not seen by vSphere when added as uplink.

   For further information on how to manipulate the uplink, please refer to Section 5.3, “Adding the Device as an uplink to an Existing Vswitch using the CLI,” on page 10 of the VMware User Manual. See Table 2, “Documents List,” on page 9.

4.4.2 Installing and Running the offline_bundle Driver on ESXi-5.x

1. Copy the offline_bundle zip file to ESXi 5.0 machine and extract its contents.

2. You can install the driver in one of the following ways:
   a. Remove any earlier version of the driver from your VMware ESXi server machine prior to installing the new version. Run:
      
      ```
      #> esxcli software vib list
      #> esxcli software vib remove -n net-mlx4-en
      ```
b. Install the mlx4_en driver offline_bundle package. Run:

```bash
#> esxcli software vib install -d
<path>/mlx4_en-mlnx-1.6.1.2-offline_bundle-471530.zip
```

c. Reboot ESXi server. (The driver will be loaded automatically).

OR

a. Update the driver. Run:

```bash
#> esxcli software vib update -n net-mlx4-en -d
<path>/mlx4_en-mlnx-1.6.1.2-offline_bundle-471530.zip
```

b. Reboot ESXi server. (The driver will be loaded automatically).

**To verify that the driver is loaded, run:**

```bash
#> vmkload_mod -l | grep mlx4_en
```

**To query network uplinks installed on your machine, run:**

```bash
#> esxcli network nic list
```

The number of uplinks claimed by MLX4_EN driver should be displayed.

---

In Non Multifunction Mode, port 2 is identified as a pseudo device. Therefore devices are not seen by vSphere when added as uplink.

For further information on how to manipulate the uplink, please refer to Section 5.3, “Adding the Device as an uplink to an Existing Vswitch using the CLI,” on page 10 of the VMware User Manual. See Table 2, “Documents List,” on page 9.

### 4.4.3 Removing the VIB/offline_bundle Driver

**To remove the VIB/offline_bundle driver package from the ESXi server machine, run:**

```bash
#> esxcli software vib remove -n net-mlx4-en
```

### 4.5 FlexBoot

FlexBoot supports remote Boot over Ethernet. This technology is based on the Preboot Execution Environment (PXE) standard specification, and FlexBoot software is based on the open source iPXE project (see www.ipxe.org). For more information go to [http://www.mellanox.com](http://www.mellanox.com) => Products => Software => Ethernet Drivers => Download.
5 Updating Adapter Card Firmware

Each card is shipped with the latest version of qualified firmware at the time of manufacturing. However, Mellanox issues firmware updates occasionally and the most recent firmware can be obtained from: http://www.mellanox.com => Support. Check that the firmware on your card is the latest found on the Mellanox site, if not update to the latest version found on the Mellanox web site.

Firmware can be updated on the stand-alone single card using the flint tool of the Mellanox Firmware Tools (MFT) package. This package is available for download, along with its user manual, from the Mellanox Firmware Tools page. See http://www.mellanox.com => Software => Firmware Tools.

The following steps describe how to retrieve the PSID (firmware identification) and programmed firmware version of your adapter card. They also describe how to update the card with the latest firmware version available.

1. Retrieve the PSID and firmware version:
   a. Install the MFT package. The package is available at http://www.mellanox.com => Products => Software => Firmware Tools. Make sure to download the package corresponding to your computer’s operating system.
   b. Enter: mst start.
   c. Get the Mellanox mst device name using the command "mst status". The mst device name will be of the form: /dev/mst/mt4099_pci_cr0.
   d. Get the PSID (firmware identification) and programmed firmware version using the command.

   Note: The shown versions and/or parameter values in the example below may not reflect the latest or actual values for this product, and are included here for illustration purposes only.

```
flint -d /dev/mst/mt4099_pci_cr0 q
Image type: ConnectX
FW Version: 2.30.4260
Device ID: 4099
Description: Node Port1 Port2
Sys image
GUIDs:
fffffffffffffff ffffffffffffffff
fffffffffffffff ffffffffffffffff
MACs: 0002c9305350
0002c9305351
VSD:
PSID: MT_1080120023
```

1. Compare the programmed firmware version with the latest available.
   a. Go to Mellanox’s web site: http://www.mellanox.com/supportdownloader. See Figure 7.
   b. Enter your card PSID to display the latest firmware file. The file name of the binary is composed by combining the firmware name, the firmware release version, and the card part number.

   Note: Please contact Mellanox System Support if you cannot find the firmware binary for your adapter card.
1. If a newer firmware version exists for your adapter card on the Web, update the firmware as follows:
   a. Download the firmware (image) zip file from the Support Downloader (see Step 2a above).
   b. Unzip the firmware image.
   c. Burn the firmware image. Enter:

```
> flint -d /dev/mst/mt4099_pci_cr0 -i <binary image> burn
```

   a. Reboot the computer.
   b. Enter: mst start.
   c. Verify that the card firmware was updated successfully.

```
> flint -d /dev/mst/mt4099_pci_cr0 q
Image type: ConnectX
FW Version: 2.9.4100
Device ID: 4099
...```

6 Troubleshooting

6.1 General

| GUID of ConnectX-3 Ethernet adapter cards | • Please use the GUID value returned by the fabric/driver utilities (not 0xfffff). See Appendix B.1, “Retrieving Adapter Card GUID,” on page 58. |
| Server unable to find the adapter | • Ensure that the adapter is placed correctly  
• Make sure the adapter slot and the adapter are compatible  
• Install the adapter in a different PCI Express slot  
• Use the drivers that came with the adapter or download the latest  
• Make sure your motherboard has the latest BIOS  
• Try to reboot the server |
| The adapter no longer works | • Reseat the adapter in its slot or a different slot, if necessary  
• Try using another cable  
• Reinstall the drivers for the network driver files may be damaged or deleted  
• Reboot the server |
| Adapters stopped working after installing another adapter | • Try removing and re-installing all adapters  
• Check that cables are connected properly  
• Make sure your motherboard has the latest BIOS |
| Link indicator light is off | • Ensure that adapter driver/s is loaded  
• Try another port on the switch  
• Make sure the cable is securely attached  
• Check you are using the proper cables that do not exceed the recommended lengths  
• Verify that your switch and adapter port are compatible |
| Link light is on, but with no communication established | • Check that the latest driver is loaded  
• Check that both the adapter and its link are set to the same speed and duplex settings |
## 6.2 Linux

| Environment Information | cat/etc/issue  
|                         | uname –a  
|                         | cat/proc/cupinfo | grep 'model name' | uniq  
|                         | ofed_info | head -1  
|                         | ifconfig –a  
|                         | ethtool <interface>  
|                         | ethtool –i <interface_of_Mellanox_port_num>  
|                         | ibdev2netdev  
| Card Detection | lspci | grep –i Mellanox  
| Mellanox Firmware Tool (MFT) | Download and install MFT: [http://www.mellanox.com/content/pages.php?pg=management_tools&menu_section=34](http://www.mellanox.com/content/pages.php?pg=management_tools&menu_section=34)  
|                         | Refer to the User Manual for installation instructions.  
|                         | Once installed, run:  
|                         | mst start  
|                         | mst status  
|                         | flint –d <mst_device> q  
| Ports Information | ibstat  
|                         | lbv_devinfo  
| Firmware Version Upgrade | To download the latest firmware version refer to [http://www.mellanox.com/supportdownloader](http://www.mellanox.com/supportdownloader)  
| Collect Log File | /var/log/messages  
|                         | dmesg > system.logF |
## 6.3 Windows

<table>
<thead>
<tr>
<th>Environment Information</th>
<th>From the Windows desktop choose the Start menu and run: msinfo32. To export system information to a text file, choose the Export option from the File menu. Assign a file name and save.</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

\(^a\) For both operational and non-operational states

\(^b\) Air flow is measured ~1” from the heat sink between the heat sink and the cooling air inlet.
## 7.2 MCX314A-BCBT Specifications

### Table 8 - MCX314A-BCBT Specifications Table

<table>
<thead>
<tr>
<th>Physical</th>
<th>Size: 2.71 in. x 5.6 in. (68.90mm x 142.25 mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector:</td>
<td>QSFP+</td>
</tr>
</tbody>
</table>

### Protocol Support

- **Ethernet**: 40GBASE-CR4/-SR4/-LR4; also supports the following when used with a QSA: 10GBASE-CR/-SR/-LR; 1000BASE-T/-SR/-LR
- **Data Rate**: 1/10/40Gb/s – Ethernet
- **PCI Express Gen3**: SERDES @ 8.0GT/s, 8 lanes (2.0 and 1.1 compatible)

### Power and Environmental

- **Voltage**: 12V, 3.3V
- **Typ Power**: Passive Cables 7.69W
- **Max Power**: Passive Cables 9.35W
- **Max power available through QSFP+ port**: 3.5W
- **Temperature**: Operational 0°C to 55°C  
  Non-operational 0°C to 70°C
- **Humidity**: 90% relative humidity
  a. For both operational and non-operational states
- **Air Flow for QSFP+ 1.5W**: 200LFM
  b. Air flow is measured ~1” from the heat sink between the heat sink and the cooling air inlet.
- **Air Flow for QSFP+ 3.5W**: 900LFM

### Regulatory

- **EMC**: Refer to the following link:
- **Safety**: IEC/EN 60950-1:2006  
  ETSI EN 300 019-2-2  
  IEC 60068-2-64, 29, 32
- **RoHS**: RoHS-R6

### Cable Support

Please refer to [www.mellanox.com => Products => Cables and Transceivers](www.mellanox.com)
7.3 Adapter LED Operation

There are two I/O LEDs per port. See Table 9 for different LED functions.

Table 9 - Physical and Logical Link Indication

<table>
<thead>
<tr>
<th>LED</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green - physical link</td>
<td>• Constant on indicates a good physical link</td>
</tr>
<tr>
<td></td>
<td>• If neither LED is lit, then the physical link has not been established</td>
</tr>
<tr>
<td>Yellow - logical (data activity link)</td>
<td>• A blinking yellow indicates activity (data transfer)</td>
</tr>
<tr>
<td></td>
<td>• Stays off when there is no activity</td>
</tr>
</tbody>
</table>

The short bracket has the same port and LED footprints as the tall bracket.
7.4 Board Mechanical Drawing and Dimensions

All dimensions are in millimeters.
All the mechanical tolerances are +/- 0.1mm.

B.1 Retrieving Adapter Card GUID

On ConnectX-3 Ethernet adapter cards, there is a mismatch between the GUID value returned by firmware management tools and that returned by fabric/driver utilities that read the GUID via device firmware (e.g., using ibstat). Mlxburn/flint returns 0xffff as GUID while the utilities return a value derived from the MAC address. For all driver/firmware/software purposes, the latter value should be used. Please see the below example.
ibstat
CA 'mlx4_0'
CA type: MT4099
Number of ports: 2
Firmware version: 2.30.4260
Hardware version: 1
Node GUID: 0x0002c90300305350
System image GUID: 0x0002c90300305350
Port 1:
   State: Down
   Physical state: Disabled
   Rate: 10
   Base lid: 0
   LMC: 0
   SM lid: 0
   Capability mask: 0x00010000
   Port GUID: 0x0202c9fffe305350
   Link layer: Ethernet
Port 2:
   State: Down
   Physical state: Disabled
   Rate: 10
   Base lid: 0
   LMC: 0
   SM lid: 0
   Capability mask: 0x00010000
   Port GUID: 0x0202c9fffe305351
   Link layer: Ethernet

flint -d /dev/mst/mt4099_pci_cr0 q
Image type: ConnectX
FW Version: 2.30.4260
Device ID: 4099
Description: Node             Port1            Port2            Sys image
GUIDs: ffffffffffffffff ffffffffffffffff ffffffffffffffff
MACs: 0002c9305350     0002c9305351
VSD: MT_1080120023
Appendix C: Safety Warnings

1. Installation Instructions

Read all installation instructions before connecting the equipment to the power source.

2. Over-temperature

This equipment should not be operated in an area with an ambient temperature exceeding the maximum recommended: 55°C (131°F).

To guarantee proper air flow, allow at least 8cm (3 inches) of clearance around the ventilation openings.

3. During Lightning - Electrical Hazard

During periods of lightning activity, do not work on the equipment or connect or disconnect cables.

4. Copper Cable Connecting/Disconnecting

Some copper cables are heavy and not flexible, as such they should be carefully attached to or detached from the connectors. Refer to the cable manufacturer for special warnings and instructions.

5. Equipment Installation

This equipment should be installed, replaced, or serviced only by trained and qualified personnel.

6. Equipment Disposal

Disposal of this equipment should be in accordance to all national laws and regulations.

7. Local and National Electrical Codes

This equipment should be installed in compliance with local and national electrical codes.

8. Hazardous Radiation Exposure

Caution – Use of controls or adjustment or performance of procedures other than those specified herein may result in hazardous radiation exposure.
Appendix D: Avertissements de sécurité d’installation (Warnings in French)

1. Instructions d’installation

Lisez toutes les instructions d’installation avant de brancher le matériel à la source d’alimentation électrique.

2. Température excessive

Ce matériel ne doit pas fonctionner dans une zone avec une température ambiante dépassant le maximum recommandé de 55°C (131°F). Un flux d’air de 200 LFM à cette température ambiante maximale est nécessaire. En outre, pour garantir un bon écoulement de l’air, laissez au moins 8 cm (3 pouces) d’espace libre autour des ouvertures de ventilation.

3. Orages – dangers électriques

Pendant un orage, il ne faut pas utiliser le matériel et il ne faut pas brancher ou débrancher les câbles.

4. Branchement/débranchement des câbles en cuivre

Les câbles en cuivre sont lourds et ne sont pas flexibles, il faut donc faire très attention en les branchant et en les débranchant des connecteurs. Consultez le fabricant des câbles pour connaître les mises en garde et les instructions spéciales.

5. Installation du matériel

Ce matériel ne doit être installé, remplacé ou entretenu que par du personnel formé et qualifié.

6. Elimination du matériel

L’élimination de ce matériel doit s’effectuer dans le respect de toutes les législations et réglementations nationales en vigueur.

7. Codes électriques locaux et nationaux

Ce matériel doit être installé dans le respect des codes électriques locaux et nationaux.
8. Exposition au rayonnement grave

Mise en garde – l'utilisation de commandes ou de réglages ou l'exécution de procédures autres que ce qui est spécifié dans les présentes peut engendrer une exposition au rayonnement grave.

Appendix E: Sicherheitshinweise (Warnings in German)

1. Installationsanleitungen

Lesen Sie alle Installationsanleitungen, bevor Sie das Gerät an die Stromversorgung anschließen.

2. Übertemperatur

Dieses Gerät sollte nicht in einem Bereich mit einer Umgebungstemperatur über der maximal empfohlenen Temperatur von 55°C (131°F) betrieben werden. Es ist ein Luftstrom von 200 LFM bei maximaler Umgebungstemperatur erforderlich. Außerdem sollten mindestens 8 cm (3 in.) Freiraum um die Belüftungsoffnungen sein, um einen einwandfreien Luftstrom zu gewährleisten.

3. Bei Gewitter - Elektrische Gefahr

Arbeiten Sie während eines Gewitters und Blitzschlag nicht am Gerät, schließen Sie keine Kabel an oder ab.

4. Anschließen/Trennen von -Kupferkabel

Kupferkabel sind schwer und nicht flexible. Deshalb müssen sie vorsichtig an die Anschlüsse angebracht bzw. davon getrennt werden. Lesen Sie die speziellen Warnungen und Anleitungen des Kabelherstellers.

5. Geräteinstallation

Diese Gerät sollte nur von geschultem und qualifiziertem Personal installiert, ausgetauscht oder gewartet werden.

6. Geräteentsorgung

Die Entsorgung dieses Geräts sollte unter Beachtung aller nationalen Gesetze Bestimmungen erfolgen.

7. Regionale und nationale elektrische Bestimmungen t

Dieses Gerät sollte unter Beachtung der regionalen und nationalen elektrischen Bestimmungen installiert werden.

This equipment should be installed in compliance with local and national electrical codes.
8. Strahlenkontakt

Achtung – Nutzung von Steuerungen oder Einstellungen oder Ausführung von Prozeduren, die hier nicht spezifiziert sind, kann zu gefährlichem Strahlenkontakt führen.

Appendix F: Advertencias de seguridad para la instalación (Warnings in Spanish)

1. **Instrucciones de instalación**
   - Antes de conectar el equipo a la fuente de alimentación, leer todas las instrucciones de instalación.

2. **Sobrecalentamiento**
   - No se debe utilizar el equipo en un área con una temperatura ambiente superior a la máxima recomendada: 55°C (131°F). Además, para garantizar una circulación de aire adecuada, se debe dejar como mínimo un espacio de 8 cm (3 pulgadas) alrededor de las aberturas de ventilación.

3. **Cuando hay rayos: peligro de descarga eléctrica**
   - No utilizar el equipo ni conectar o desconectar cables durante períodos de actividad de rayos.

4. **Conexión y desconexión del cable Copper**
   - Dado que los cables de cobre son pesados y no son flexibles, su conexión a los conectores y su desconexión se deben efectuar con mucho cuidado. Para ver advertencias o instrucciones especiales, consultar al fabricante del cable.

5. **Instalación de equipos**
   - La instalación, el reemplazo y el mantenimiento de este equipo estarán a cargo únicamente de personal capacitado y competente.

6. **Eliminación de equipos**
   - La eliminación definitiva de este equipo se debe efectuar conforme a todas las leyes y reglamentaciones nacionales.

7. **Códigos eléctricos locales y nacionales**
   - Este equipo se debe instalar conforme a los códigos eléctricos locales y nacionales.

8. **Exposición a niveles de radiación peligrosos**
   - Precaución: el uso de controles o ajustes o la realización de procedimientos distintos de los que aquí se especifican podrían causar exposición a niveles de radiación peligrosos.
PRODUCTO LÁSER DE CLASE 1 y referencia a las normas de láser más recientes: IEC 60825-1:2007/03 y EN 60825-1:2007
